

DevOps Engineer

We're looking for passionate, skilled and easygoing DevOps Engineers (1-3 year experience) for our software development projects.

Candidates should have a solid understanding on the following:

1. Linux Administration: Redhat/CentOS and Ubuntu based distros
2. Virtualization & Containers: VMWare (ESXi, vSphere), Docker
3. Scripting: Shell, Ruby and/or Python scripting
4. Configuration Management tools: Ansible

Administration and/or management level know-how on any of the following items are *a big plus*:

1. NoSQL/Messaging Systems: ElasticSearch, Redis, RabbitMQ, Storm, Spark
2. Monitoring & Alerting Frameworks: Sensu/Nagios or similar
3. System Performance Tuning: OS and Hardware level

Non-technical skills and expertise that we look for:

- Relevant degree from a reputable university
- Fluency in English
- No military service obligation for male candidates
- Can work independently as well as good team player

Please apply with:

1. Brief description of your skills, passions and work style
2. Link to your blog or other weekend projects you have worked on

Job Description:

The applicants will be expected to:

- Work closely with the development team,
- Prepare and maintain the staging/pre-prod/prod environments for the projects,
- Create solutions to monitor the systems and alert on different severity levels,
- Give support to any environment related problems that may occur,
- Document the DevOps process and steps on company wiki and transfer the know-how to team members,
- Test and apply high availability scenarios for several components used in projects,
- Prepare and run performance benchmarks on several components of the projects
